Smart Tools for Smart Schools™

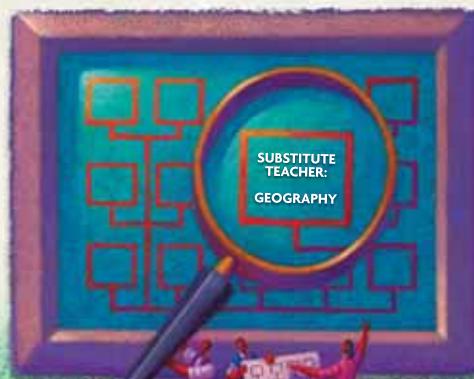

Increase Efficiency. Enhance Capabilities.

Each day, approximately 7-14% of preK-12 teachers are absent — forcing school districts to spend time and money finding replacements. Often, this is done manually — or with systems that fill the slots with the “first available” substitute. Unfortunately, that’s not making good use of your district’s resources. Nor is it furthering student achievement. Fortunately, there’s a better way: **SmartFindExpress®** from eSchool Solutions.

More than 600 school districts of all sizes rely on **SmartFindExpress®**. The easy-to-use software automates substitute management, increases fill rates with the most highly qualified subs, expands the substitute pool, and enhances absenteeism reduction strategies.

But, that’s not all. eSchool Solutions is committed to developing innovative solutions that improve administrative operations and substitute management. One recent example: Spanish and Canadian-French versions of **SmartFindExpress®** to serve bilingual districts. And more improvements are on the horizon.

“Easy-to-use **SmartFindExpress®** automates the substitute management process.”

Place Qualified Subs. Boost Achievement.

The National Council on Teacher Quality estimates that students spend an average of one full year under the supervision of substitute teachers during their K-12 experience. However, districts can’t afford to waste instructional time — especially with the increased importance of measurable student achievement.

With **SmartFindExpress®**, you can place qualified substitute teachers in classrooms — minimizing “lost” teaching days and helping to achieve accountability standards. The software automatically assigns substitutes according to your district’s specifications. With over 100 parameter settings, you can control how substitutes are selected for jobs — using criteria such as location, skill sets, and contract guidelines. Thanks to this flexibility, **SmartFindExpress®** can meet your district’s specific needs . . . while increasing efficiency and reducing overhead.

“Minimize ‘lost’ teaching days, maximize instructional time.”
